WI Community Health Centers and health care providers are doing all they can to provide care and support to members of their communities during the COVID-19 public health emergency.

**Responding to the Call for Care**

- Health Centers help absorb the shock from the overwhelmed health care system by **triaging patients to the correct care**. They assess patients' symptoms, connect them to providers, and provide patient education.

- All 17 WI Health Centers **provide virtual visits**. These visits include medical visits, behavioral health and SUD services, dental visits, and outreach and enrollment services.

- Health Centers also **provide Emergency and Urgent In-Person Services**. Health Centers who provide dental are open for emergency dental services. Centers are also open for urgent medical and behavioral health services and are taking protective measures when seeing patients in person.

- Many Health Centers also **provide convenient drive-through or mail pharmacy services, in-person or drive-through lab services, COVID-19 hotlines, and COVID testing**.

**Wisconsin's 17 Community Health Centers are key players in the state's response to the COVID-19 Pandemic**

Together, they serve over 300,000 Wisconsinites each year, providing medical, dental, behavioral health & SUD services.

In addition to these operational changes, Health Centers are looking towards the future and are preparing for what the health care system will look like once the Safer at Home order is lifted.
