The Wisconsin State Telecommunications Association (WSTA) and the Wisconsin Economic Development Corporation (WEDC) partnered to create an interactive map that identifies business parks, industrial parks and TIF districts with gigabit broadband availability.

Wisconsin's Gigabit Business Park mapping project, the first of its kind in the nation, identifies the parks that are capable of providing broadband service of 1 gigabit per second (Gbps) or more. The map indicates whether a business park has 1Gbps, 10Gbps or 100Gbps.

There are currently 130 business and industrial parks on the map, which will continuously be updated as new sites are identified. WEDC will continue to work with WSTA and other providers to expand the list of gigabit business parks.
