

# Seagrape

*Coccoloba uvifera*

**Description:** A sprawling bush or small tree with very small white flowers. Female trees bear clusters of green “grapes” that ripen to a deep purple in late summer.

---

**Height:** Typically 20-30 feet.

---

**Light:** Full sun.

---

**Drought Tolerance:** High.

---

**Wildlife and Ecology:** Extremely important component of coastal ecosystems. Nectar plant for several types of butterflies. Fruit attracts birds and small mammals.
